## CARE AND MAINTENANCE

Ensuring proper maintenance and careful use will allow you to take full advantage of **Setino**'s potential and outstanding characteristics. Silk is an exceptional fiber which naturally requires a few simple precautions in order to make its **natural comfort** last long.

- Use a **duvet cover** whenever possible to avoid unnecessary washing.
- **In contact with air silk regains its relative humidity in a natural way**, improving its softness and volume, increasing the level of thermo-physiological comfort typical of T.Silk.
- Might you need to treat stains, **clean them individually with a white cloth** and mild soap, leaving it to air dry.
- If washing is absolutely necessary, use **cold dry cleaning** option from professional and trustworthy dry cleaners. Cold dry cleaning means washing with a cold machine, washing must be delicate and drying at low temperatures only.
- If washing at home: hand wash maximum temperature 40°C. / Short wash. / Do not use aggressive soaps. / Do not tumble dry. / Dry naturally on a horizontal surface. / Do not twist, do not wring. / Do not expose to direct sunlight. / Iron wet at max 110°C using a protection cloth.
